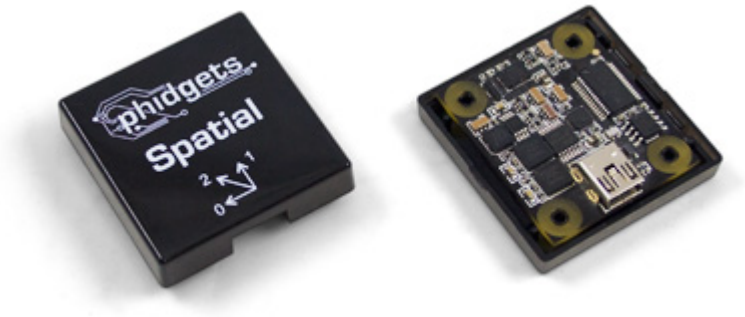
Plastic Shell Enclosure for Spatials

The 3851 Enclosure is designed to protect Phidget Spatial boards while still giving you access to the USB port through an opening in the enclosure. For a list of compatible boards, see the Compatible Products tab.

There are mounting holes that go through the bottom of the enclosure, so the board can be mounted to a flat surface and the cover can snap on top.



Note: Phidget Spatial and mounting screws **not** included.

Product Specifications

Physical Properties	
Fits Board Revision	0
Material	Polycarbonate
Thickness	1.9 mm
IP Rating	20
