5GT Idler Pulley with 12mm Bore and 30 Teeth

Idler pulleys are standard pulleys with an integrated bearing. This allows them to spin freely without impeding the rotation in your system. This is useful for when you want an adjustable way to tension a belt system that doesn’t impact the movement of the belt or place additional load on the motor.

Product Specifications

Physical Properties	
Inner Diameter	12 mm
Number of Teeth	30
