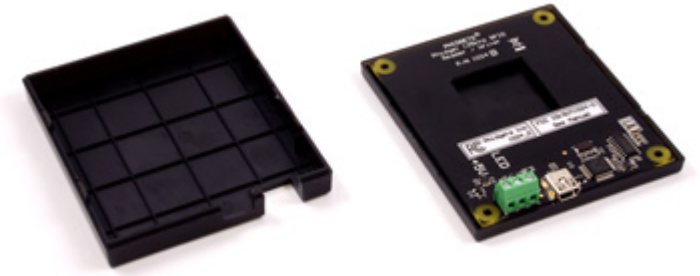
Plastic Shell Enclosure for the 1024

The 3853 Enclosure is designed to protect the 1024 – PhidgetRFID Read/Write while still giving you access to the USB port and terminal block through openings in the enclosure. Tags can be read by placing them flat on the face of the enclosure where the Phidgets logo is.

There are mounting holes that go through the bottom of the enclosure, so the board can be mounted to a flat surface and the cover can snap on top.



Note: PhidgetRFID and mounting screws **not** included.

Product Specifications

Physical Properties	
Fits Board Revision	0
Material	Polycarbonate
Thickness	1.9 mm
IP Rating	20
