

Roller Micro Switch SPDT – Bag of 2

Product Description

This small single-pole, double-throw (SPDT) limit switch is ideal for keeping track of physical parts in a system. It can also be used as a simple user input button as it makes a noticable click when pressed. It can switch 5A and 125V DC or 250V AC.

The wheel on the end of the lever allows the switch to be triggered by objects brushing up against the switch in either direction.

Product Specifications

Sensor Properties

Sensor Type	Input (Switch)
Switch Type	SPDT

Physical Properties

Travel	4 mm
--------	------

Electrical Properties

Switching Current Max	5 A
Switching Voltage Max (AC)	250 V AC
Switching Voltage Max (DC)	125 V DC
