

Waterproof Flex Switch

This heavy duty switch combines the functionality of a single pole, double throw (SPDT) switch with a double break meaning you can switch two completely different circuits with it should you so desire. If not, you can simply jumper both pins on one side together to return to normal SPDT behaviour.

For maximum switching ratings please be sure to review the manufacturer's datasheet as the current rating are dependent on the voltage being switched.

Comes Packaged with:

- A Hardware mounting kit

Product Specifications

Sensor Properties

Sensor Type	Input (Flex Switch)
Switch Type	SPDT Double Break

Physical Properties

Travel	5.5 mm
--------	--------

Electrical Properties

Switching Voltage Max (AC)	250 V AC
Switching Voltage Max (DC)	250 V DC
