

#40 Roller Chain

0.5" Pitch roller chain, for use with #40 sprockets. Roller chain can handle more load than belt systems, and is normally used for rotary systems. This number 40 chain is the strongest option we offer for transmitting torque. Chain can be used to create linear motion, but has to be run with a bit of slack in the system. Sold by the meter.

Product Specifications

Physical Properties

Working Tensile Strength 3.5 kN
Sprocket Series # 40
