

17mm Precision Ground Rotary Shaft (w/ keyway)

This shaft is made of 1045 carbon steel, precision ground to exactly 17mm, and chrome plated. The production process is the same as linear shaft – except the shaft is not case hardened, allowing you to easily drill and machine the shaft. This shaft has a keyway machined into the entire length. 17mm is one of the ‘core’ shaft diameters in our mechanical product line – in addition to 8mm, 12mm and 25mm. 17mm is a great diameter for higher power belt transmissions (GT5) and #40 chain systems. We also sell the 17mm shaft without a keyway.

- TRM4017 – 17mm Precision Ground Rotary Shaft – 1000mm (no keyway)
