

25mm Precision Ground Rotary Shaft (w/ keyway)

This shaft is made of 1045 carbon steel, precision ground to exactly 25mm, and chrome plated. The production process is the same as linear shaft – except the shaft is not case hardened, allowing you to easily drill and machine the shaft. This shaft has a keyway machined into the entire length. 25mm is one of the ‘core’ shaft diameters in our mechanical product line – in addition to 8mm, 12mm and 17mm. 25mm is ideal for heavy duty #40 chain systems. We also sell the 25mm shaft without a keyway.

- TRM4018 – 25mm Precision Ground Rotary Shaft – 1500mm (no keyway)
