

# Bracket-PG30-30x60

This bracket strengthens 90° joints in your system. These brackets are larger and sturdier than the TSL4103 variant so will give even more rigidity to your structure. It is suitable for use with PG30 extrusions. You will need 4 M6x14 bolts with washers and nuts to install. We recommend this part as a reinforcing component rather than the sole means for connecting 2 profiles together.
