

Bracket-PG40-40x80

Product Description

This bracket strengthens 90° joints in your system. These brackets are larger and sturdier than the TSL4106 variant so will give even more rigidity to your structure. It is suitable for use with PG40 extrusions. You will need 4 M8x20 bolts with washers and nuts to install. We recommend this part as a reinforcing component rather than the sole means for connecting 2 profiles together.
