

PG20 Profile 20x20

These extrusions form the base structural components of any T-slot system. The idea of this system is to have modular components for assembling frames/chassis for whatever you might like. There is a wide array of hardware that attached to the extrusions by sliding into the namesake slots and screwing down. This whole system afford more flexibility than welded framing as it is easy to disassemble and reassemble on the fly and while it still requires some machining it is much easier to set up and maintain than a custom built frame.

This particular extrusion is in the PG20 series which means the extrusions have a profile that is 20mm to a side. This is the smallest and lightest we have to offer which makes it ideal for smaller projects where weight and cost are more of a concern than maximum strength and rigidity.

Product Specifications

Look-up Reference

Catalogue Page 16
Manufacturer Part Number 1.11.20.020020.04

Physical Properties

T-Slot Profile Size PG20
Number of Slots 4
