

12V/0.8Kg-cm/46RPM 50:1 DC Gear Motor

Product Description

The 3256 is a 12 volt gear motor, generating 0.82 Kg-cm of torque at 46 RPM. It is very efficient for its size, so less power is lost in the form of heat.

This family of motors (3254, 3255, 3256, 3257) have the same gearbox type and mounting metrics as the (3258, 3259, 3260) family of motors.

Motor Controller and Connection

The 3256 DC motor connects to either of the following controllers:

- 1064 – PhidgetMotorControl HC
- 1065 – PhidgetMotorControl 1-Motor

You'll need to solder wires to the contacts of the motor in order to connect it to a controller.

Product Specifications

Motor Properties

Motor Type	DC Motor
Output Power (Mechanical)	590 mW
Maximum Speed at Rated Voltage	46 RPM
Rated Torque	820 g·cm
Stall Torque	5.1 kg·cm

Electrical Properties

Rated Voltage	12 V DC
Rated Current	90 mA
Stall Current	260 mA

Physical Properties

Shaft Diameter	6 mm
Weight	137 g
Recommended Wire Size (Motor)	20 -26 AWG

Gearbox Specifications

Gearbox Type	Spur
Gear Ratio	50 : 1
Number of Gear Trains	4
Maximum Strength of Gears	12 kg·cm
Shaft Maximum Axial Load	35 N
Shaft Maximum Radial Load	25 N
