<u>Hitec HS-815BB Mega Sail Servo</u>

Accessories Bag

Product Description

The HS-815BB Mega sail arm servo has up to 180 degrees of travel and comes with a Heavy Duty 4.5 inch arm, with a dual ball bearing supported output shaft.

RC servos are hobbyist remote control servos typically used mostly in radiocontrolled models, where they provide actuation for various mechanical systems such as the steering of a car, the flaps on a plane, or the rudder of a boat. These servos are not industrial grade and are not recommended for continuous heavy use.

Motor Controllers

Due to its large amount of torque, the Mega Sail Servo will only work with the **1061 - PhidgetAdvancedServo 8-Motor**. This servo motor will not operate properly with the Phidgets 1066.

Product Specifications

Motor Properties

INOTOR IVAD	Limited Rotation Servo
Range of Rotation	180°
Maximum Speed at Rated Voltage	125°/s
Rated Torque	19.8 kg·cm

Physical Properties

Gear Train Material	Plastic
Bearing Type	Dual Ball Bearing
Motor Length	57 mm
Motor Width	66 mm
Motor Depth	30 mm
Weight	152 g

Electrical Properties

Rated	Voltage				5 V	DC
Rated	Current	(on	1061	controller)	350	mΑ
Rated	Current	(on	1066	controller)	350	mA
Stall	Current	(on	1061	controller)	3.3	Α
Stall	Current	(on	1066	controller)	450	mΑ

These product specifications are based on our own tests using the HS815 motor with the Phidgets 1061 motor controller.
